

## THE 2011 LEARNING OPPORTUNITIES INDEX: QUESTIONS AND ANSWERS

### **Q1. *What is the Learning Opportunities Index (LOI)?***

**A1.** The LOI ranks each school based on measures of external challenges affecting student success. The school with the greatest level of external challenges is ranked number one and is described as highest on the index. It is important to acknowledge that students in all schools have some external challenges, even those schools that are ranked very low on the LOI.

The LOI measures relative need and compares all schools on exactly the same set of data collected in a consistent, reliable, and objective manner. The LOI removes the subjectivity that may shape perceptions of individual school needs.

There are two indices – one for elementary (including junior high schools) and one for secondary.

Under various names, the Toronto District School Board (TDSB) and its legacy systems have calculated some variation of the index for over 30 years. After a year-long review and external consultation with stakeholders in 2007-08, the 2009 calculation of the index was recommended by a steering committee consisting of board staff and representatives from the Inner City Advisory Committee. This 2011 LOI uses the same methodology employed in 2009 though with updated data.

### **Q2. *Why has the LOI been developed?***

**A2.** Public education is designed to give all children an equal opportunity to succeed. The TDSB recognizes that students face varying degrees of challenge which can impact their opportunity to achieve high educational outcomes. Educational research has demonstrated that children from lower income families face more significant barriers in achieving high educational outcomes.

Because of its commitment to achieving equitable academic opportunities, the TDSB wants to ensure that every student has an equitable opportunity to succeed. This means ensuring all students have access to available resources. The LOI helps to ensure that children who have access to fewer resources at home and in their neighbourhoods have increased access to available resources in their schools. The LOI will assist with steering additional resources to the schools serving students who face greater challenges.

**Q3. What are the components of the LOI?**

**A3.** The LOI is composed of variables which are combined into a single index. The variables used are:

1. **Median Income** – A measurement of income levels, at which half the residents earn more and half of them earn less. This is measured at the level of the student's neighbourhood.
2. **Percentage of Families whose income is below the Low Income Measure (before tax)** – Also known as the Low Income Measure, this is the percentage of families in a student's neighbourhood whose income is at or less than half the median income in the city.
3. **Percentage of Families Receiving Social Assistance** – The proportion of families in a student's neighbourhood whose income comes from government sources.
4. **Adults with Low Education** – The percentage of people in a student's neighbourhood without a high school diploma.
5. **Adults with University Degrees** – The percentage of people in a student's neighbourhood with at least one university degree.
6. **Lone-Parent Families** – The proportion of families in a neighborhood where the parent does not live with either a spouse or common law partner.

Please note the variables described above in 1, 2, 3, and 6 are based on data about families with children.

**Q4. Why use these variables and not others?**

**A4.** The LOI is one of the TDSB's tools in responding to external challenges affecting students. The variables in the LOI have been identified as external factors that impact educational achievement. They include measures of income and poverty, parents' education, and proportion of lone-parent families. In the calculation of the LOI, the factors that most strongly track poor educational outcomes were selected.

The variables that constitute the LOI have been statistically tested against the student success indicators of TDSB students and have been shown to correlate with measures such as the EQAO Grade 3 and 6 assessment results, the Ontario Secondary School Literacy Test (OSSLT), and credit achievement.

Over the past few years, a number of other variables have been considered for inclusion in the LOI, but have not been included. For some variables (e.g., crime), the ways to consistently link information to each student are not available (student-level information serves as the basis of the LOI). For other variables, such as crowding, there are no clear consensus in the literature on whether they have any noticeable effect on student achievement. Lastly, some other proposed variables were too blunt a measure, and do not show a strong correlation to student achievement.

As a result of the 2007-08 review, immigration, mobility, and housing were removed from the index because they did not show a sufficiently strong relationship to student achievement.

The variables used in the LOI will be periodically re-evaluated. It is possible that in the future, as new data becomes available, the Board will approve a change in the variables that are included in the LOI.

**Q5. *How does the Federal Census data connect to the students in our school?***

**A5.** We are able to obtain postal code data for each student from our Student Information System (SIS); however, some variables such as income are appropriately protected by privacy legislation and cannot be collected. As a result, most of the measures use a more indirect route: taking the postal code of where the student lives, and linking it with information from already-existing sources.

For income, the postal code of each student is linked to tax returns of all families with school-aged children living in that postal code. For other variables such as the proportion of lone-parent families and education, the postal code is linked to information from the Federal Census (from the immediate neighbourhood or dissemination area in which the student lives).

Therefore, all measures in the index have a connection with the student based on the neighbourhood in which the student lives.

**Q6. *Why is it that schools in the same neighbourhood have different LOI rankings?***

**A6.** The LOI is calculated from the characteristics of the students attending a school, and not from the characteristics of the area around the school. This is important to remember because in many cases, students will not come from the immediate neighbourhood of the school. For example, the school may be located in an area of comparative affluence, but many of the students may come from lower income housing several blocks away, or may be bussed or take transit. The information about the student is gathered from the location of where the student lives.

**Q7. *Why are some schools lower on this LOI than the previous LOI when the students appear to be just as needy and at-risk as before?***

**A7.** The LOI is a measure of relative need and it provides a comparison with other schools at a specific point in time. Students in a particular school may have exactly the same level of need as in the past, but the LOI score may not remain static. A particular school's LOI score is also influenced by changes that may have occurred in other schools. It may be that the needs of students in several other schools have increased over time to a greater degree leading to a reduction of the LOI ranking even though the actual or absolute level of need has remained exactly the same.

**Q8. How is the LOI used?**

**A8.** There is a wide range of applications for the LOI within the TDSB to help allocate staff and other available resources. During the staffing allocation process, the LOI is used as one input along with other types of information such as student headcount or full-time equivalent (FTE) status.

**Q9. What has changed in the most recent (2011) Index?**

**A9.** Some schools will see their position shift with the most recent LOI. Shifts could occur because of the normal year-over-year changes in school boundaries and/or population which would affect the scores.

There is a strong correlation between the current LOI and the LOI produced two years ago. The correlation for the elementary school index is 0.989 and the correlation for the secondary school index is 0.988.

**Q10. How does the LOI address year-over-year changes in schools?**

**A10.** The LOI is recalculated every two years.

In some instances, year-over-year changes in a specific variable could result in a significant shift in a school's ranking. Sometimes, these changes are short-lived and are seen only in one specific year.

To counteract one-time swings that occur in a small number of schools each year, the LOI is calculated using a rolling three-year average of data for each of the variables in the index. The current index uses data from the school years 2008-09, 2009-10, and 2010-11.

**Q11. What is the relationship of the LOI to student achievement?**

**A11.** There is a strong relationship between the LOI and student achievement but it is not absolute. Some schools that are high on the LOI continue to perform well on measures of student achievement.

It should be emphasized that the LOI does not use student achievement in its calculation.

**Q12. How accurate is the LOI?**

**A12.** The LOI is extremely accurate. The external review of the LOI found that it is well suited to its purpose and that the statistical methods used in its construction are sound. As noted above, the changes that were made in the 2009 LOI make it even more strongly correlated with external challenges to student achievement.

The accuracy of the LOI depends on two factors: the accuracy of the information entered by schools into our student information system (SIS) and the data accuracy to which it is linked (i.e., tax data, and the Federal Census). For example, all components of the LOI are derived by linking data to the postal code of the student's residence. Postal code data is complete for 99.9% of student records. However, there is no current way to check on the validity of a postal code compared to an address. If a postal code is entered incorrectly, it will incorrectly link to tax and census data.

The extent of such inaccuracies and the impact they may have on LOI rankings cannot be determined definitively. Regardless, we are confident that the LOI is an accurate representation of the differences among schools and well correlated with external challenges to student achievement.
